Status Report for George		02/14/2001 09:23 AM	

Document Body

Hello James-

Jim and I updated each other regarding on-going activities at George and the following is a status report by activity. We hope that this will assist you at your upcoming RPM meeting.

Dieldrin Investigation:

Jim updated me on the conference call and it appears that the Air Force most recent approach is going in the right direction. Although we will know better once we receive the Memo Montgomery Watson is preparing for the Dieldrin Sampling. Jim has almost completed an oversight split sampling plan for surface soils.

Jim will continue to take the TechLaw lead on the Dieldrin Investigation.

EDB/DBCP Concerns:

I understand that EDB is an oil additive. While DBCP is a pesticide. We should look into this further. To do so we should ensure that Hydrogeologic samples using 504.1 at monitoring wells downgradient of MW-45 and SE cross-gradient. Following an evaluation of these results we might want to include them as COCs in the upcoming OU-2 ROD.

It would be helpful if you could get a commitment from the Air Force to do this additional monitoring in the next round.

Data Gaps Investigation:

What is the status of this investigation? Have they found more contamination near NZ-39?

Process Monitoring:

TechLaw did not receive the comment responses on the 3rd Annual Process Monitoring Report. We were not on the transmittal form forwarded in the Air Force email.

Jim is reviewing these comments.

OU 1 and 3 Groundwater Monitoring Report Response to Comments:

Jim is reviewing these comments.

USGS Report:

Jim is reviewing this and will prepare a summary for you.

I am at an all day meeting for Mather today. If you need anything please contact Jim.

I will be in on Thursday and Friday if you need me.

Thanks,
Indira
